

Eunha Lee

Age 2002.02.08
Email eunhalee@korea.ac.kr
Website https://eunha-l.github.io/
Interests **Drug Discovery · Protein Structure Modeling · Molecular Representation**

ABOUT

I am a **M.S. Student in the Computer Science & Engineering Department at Korea University** and a member of **DMIS Lab**, advised by **Prof. Jaewoo Kang**. My research focuses on AI-driven drug discovery, spanning **protein structure modeling**, **molecular interactions**, and **computational proteomics**. I am particularly interested in **antigen–antibody interactions** and developing predictive and generative models for biomedical applications.

EDUCATION

M.S. in Computer Science & Engineering Department, Korea University Sep 2025 – Present
DMIS Lab (Advisor: Prof. Jaewoo Kang)

B.S. in Biosystems and Medical Sciences, Korea University Mar 2021 – Aug 2025
GPA: 4.06 / 4.5

PUBLICATIONS

Hajung Kim, **Eunha Lee**, Sohyun Chung, Jueon Park, Seungheun Baek, Jaewoo Kang. **"ATTNSOM: Learning Cross-Isoform Attention for Cytochrome P450 Site-of-Metabolism."** *ISMB 2026*.

- Predicting drug metabolism sites by learning shared patterns across cytochrome P450 isoforms.

Eunha Lee*, Seungheun Baek*, Hajung Kim, Jaewoo Kang. **"EpiPose: Antibody-Specific Epitope Prediction from Unbound Structures by Learning to Reweight Docking Poses."** *Under review*.

- Predicting antibody-specific epitopes from unbound structures while accounting for binding-induced structural changes.

Hajung Kim*, Junseok Choe*, **Eunha Lee**, Sohyun Chung. **"CycloFlow: Internal Coordinate Flow Matching and Geometric Ring Closure for Cyclic Peptide Conformer Generation."** *Under review*.

- Generating 3D conformational ensembles of cyclic peptides using flow matching and geometric ring closure.

Seungheun Baek, **Eunha Lee**, Yan Ting Chok. **"FreeDIA: Search-Free Pretraining for DIA de novo Peptide Sequencing."** *Under review*.

- De novo peptide sequencing from DIA-MS/MS spectra without protein sequence database searches.

EXPERIENCE

AIGEN Sciences Inc.

AI Research Intern Feb 2026 – May 2026

- Conducted ADMET prediction research and derived 3D interaction features from predicted protein–ligand complex structures.

Undergraduate Researcher Jan 2025 – Jul 2025

- Investigated and analyzed multiple biological databases to evaluate LLM-generated hypotheses.
- Analyzed clinical data from cancer patients and conducted baseline experiments for survival analysis.

Disease Study Society (DSS), Korea University, *Member* Mar 2024 – Dec 2024

- On-campus academic society; discussed and presented biology research papers.

Aging, Metabolism and Physiology Lab, DGIST, Dec 2023 – Feb 2024
Undergraduate Intern

- Worked in a lab studying metabolism and immune physiology.
- Gained hands-on wet lab experience, including western blot, PCR and immunostaining.

PROJECTS & COMPETITIONS

ATEC2026, *Global AI and Robotics Competition* Jul 2026 – Sep 2026

- A competition testing embodied AI on real-world robot tasks; our team placed in the top 10 of 93 teams in the online qualifier and advanced to the offline round in Hong Kong.
- Implemented locomotion code and operated the real robot as the team representative.

ARPA-H Korea: LC–MS/MS-based Biomarkers for Multi-Cancer Diagnosis, *DMIS Lab, Korea University* Sep 2025 – Feb 2026

- National R&D project; preprocessed large-scale patient LC–MS/MS data and identified data quality issues.
